**AETHERANT**

The AETHER SPLIT antenna distribution system allows up to four receivers to use a pair of antennas. Thanks to the use of a low noise amplification circuit with low signal loss, it compensates for signal losses due to the breakdown of the antenna input into multiple outputs. Using four DC power connectors, it is possible to supply voltage to the receivers without using individual power supplies. The RF connections through 50 Ohm BNC connectors ensures an easy use and a safe connection between the devices.
