

RMMS8

The PRMMS8 is an ultra low noise 8-channel microphone splitter providing a direct output and a transformer isolated output for each balanced XLR input. For extra flexibility, four front panel switches enable channel linking which permits routing a single input signal to multiple outputs feeding FOH, monitor, recording and broadcast mixing consoles, or merging two input signals into a single output. For use with condenser microphones, the direct outputs serve as a path for phantom power. Each channel includes a ground lift switch to eliminate hum and interference caused by ground loops between electronic equipment connected to the PRMMS8.

<b>Manufacturer Name:</b>	PALMER
<b>Model:</b>	RMMS8
<b>Part Number:</b>	PRMMS8
<b>Inputs / Outputs</b>	8_16
<b>Application</b>	Concert, Portable PA
