

MV210-HC

 **Turbosound**

The MV210-HC is a bi-amp 3-way loudspeaker with a passive crossover used on the mid and high frequency bands. It requires 2 channels of amplifier and DSP. With these Lake XP-based pre-sets, the Module Output Mixing (MoM) setup is no longer used, but instead, these pre-sets utilize the 3 band Multiband on each of the Module outputs. The MS121 subwoofer requires 1 channel of amplifier and DSP for normal forward firing operation. Cardioid bass set ups will require additional amplifier and DSP channels. All Manchester series Loudspeakers exclusively use LAKE pre-sets via Lab Gruppen PLM+ and D series L platforms. No other amplifier and DSP platforms are supported. Manchester series has a powerful yet simple pre-set strategy utilizing the latest functionality of LAKE software, along with new acoustic compensation for length of array and throw distances required (explained later in this QSG). Pre-set data is found either via the Lake Load Library or can be downloaded from www.turbosound.com. Recommended Lab Gruppen PLM+ models for Touring applications are the PLM12k44 and PLM20k44. For installations using Lab Gruppen D series L models, please use Lab Gruppen 'CAFE' software - available for download from www.labgruppen.com - to determine the optimum amplifier configuration for your system.

Dual 10" Full Size Hybrid Curve Line Array Element

Manufacturer Name:	TURBOSOUND
Model:	MV210-HC
Part Number:	
Speaker Category	Line Array
Speaker Type	Active
Speaker Material	Wooden Cabin
Speaker Power (Watt)	3960
Resistance (ohms)	8Ω
Woofer (inches)	2 x 10
Tweeter / Driver (inches)	1.4
dB (max spl)	114.5
Weight (kg)	35.5
Frequency Response (Hz)	58 έως 20 kHz
Color	Μαύρο
Application	Concert, Installation, Portable PA

	Installation,Rental
	20/8/2023
	30/12/2023
Guarantee	1 Year Guarantee
