

BL-10R

Rated voltage: AC100V-240V,50/60Hz, Rated power: 450W Light source specification: 295W, average lifespan of 2000H Color temperature: 8500K/4500K/3200K Beam angle: Parallel beam angle adjustable from 0 ° to 4 ° Linear dimming: Mechanical linear dimming from 0% to 100% High speed flicker: pulse flicker, synchronous asynchronous flicker Flashing speed 1-20 times per second Fixed color: One fixed color wheel has 14 color chips, which can achieve half color effect, linear color conversion, and bidirectional variable speed rotating rainbow effect Static pattern: One fixed pattern wheel has 17 patterns, with adjustable pattern shaking effect and arbitrary pattern positioning function Prism: 1 independent 16 sided prism+1 8+16+24 honeycomb prism, bidirectional variable speed rotation Focusing: Using high-precision glass optical lens and electronic linear high-definition adjustment Atomization+Colorful: 1 combination atomization+colorful effect, soft and natural light spot Horizontal and Vertical: Horizontal scanning angle of 540 ° (16 bit precision scanning), vertical scanning angle of 270 ° (16 bit precision scanning), with automatic return function, using two-phase motors not only provides fast and smooth scanning but also eliminates transmission noise Display interface: Adopting LCD liquid crystal display interface in both Chinese and English Sleep function: Advanced technology is used to achieve remote sleep function. When the signal of the lamp is disconnected, it automatically enters the sleep state, making the lamp more stable and safe. The sleep time can be set by oneself. Communication design: DMX wired/wireless signal transmission, RDM bidirectional control technology, DMX version upgrade Intelligent heat dissipation: Using wind direction drainage and temperature intelligent monitoring technology, the cooling fans in different parts of the lamp are automatically driven according to the temperature at different positions of the lamp, effectively cooling
