

DN1248 PLUS-FM

KLARKTEKNIK

The DN1248 PLUS from Klark Teknik is a twelve-channel active signal splitter that provides four discrete outputs, two of which are electronically balanced and two which are transformer isolated. The unit utilizes Midas Heritage series preamps that provide wide headroom and excellent sound. Uses for the unit include the sending of stage microphones and instruments to the FOH mixer, while also sending feeds to the monitor mixer, and simultaneously to two outside broadcast/recording trucks. For instrument connection, appropriate DI boxes need to be used. The front-panel contains the twelve inputs along with three of the outputs. Also on the front-panel are solo, pad and gain, ground lift and phantom power switches. The rear-panel provides the fourth output, along with duplicates of the input channels and output 1, wired in parallel. The duplicates are provided for connection convenience, and should not be used simultaneously. The solo switches allow for monitoring individual channels via a front-panel headphone output. Multiple units can be linked, and the soloing of any channel on any unit can be monitored from any unit, thanks to solo bus connectors. All outputs transformer balanced & 2 x PSUs
